

Computer Interface COM 300 / COM 400

New Product Generation

- pc adapter for use with coin operated internet terminals or touch screen games
- provides easy utilisation of a range of coin selectors
- the perfect solution for your Internet cafés

- The COM adapter is a universal interface and has been designed to connect an electronic coin selector (EMP 77x.13, EMP 78x.13, EMP 8xx.13, EMP 90x.13), an electronic change giver (GW 100.6), a bank note reader and a charge card module with multi drop bus interface to a computer system.
- Via the serial interface of the pc card all coin and status information of the coin selector, change giver, bank note reader or charge card module can be sent to the computer system.
- A 32-bit DLL is provided together with the pc interface to incorporate the coin handling system into a Windows application (Windows 98™, Windows ME™, Windows 2000™, Windows XP™). Windows NT™ only in combination with COM 400.
- The components can also be used in combination with Linux operating system (for example Suse 8.1). A Shared Library allows implementing the payment components.
